DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-19 and 32-38, are drawn to generic wireless communication system employing a plurality of user devices in an SDMA network with specific predetermined selection criteria prior to transmission, classified in class 370, subclass 203.
- II. Claims 20-43, are drawn an access point wireless communications system capable of simultaneously servicing multiple users in an SDMA network within the coverage area of the access point, classified in class 370, subclass 310.2.
- III. Claims 44-46, are drawn to specific amount of data transmission in a wireless system, classified in class 370, subclass 235.

The inventions are distinct, each from the other because of the following reasons:

Inventions I, II and III are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because Group I requires specific predetermined criteria for selection of an orthogonal set for transmission purposes.

Whereas Group II requires simultaneously servicing multiple users in an network within

Art Unit: 2616

the coverage area of the access point having no specific predetermined criteria's, and finally Group III claims data flow control through a network via use of different antenna beams in a wireless network. The subcombination has separate utility such as Groups II and III claims specifics of access point communication and data flow control through a network respectively that do not require the inclusion of Group I.

The examiner has required restriction between combination and subcombination inventions. Where applicant elects a subcombination, and claims thereto are subsequently found allowable, any claim(s) depending from or otherwise requiring all the limitations of the allowable subcombination will be examined for patentability in accordance with 37 CFR 1.104. See MPEP § 821.04(a). Applicant is advised that if any claim presented in a continuation or divisional application is anticipated by, or includes all the limitations of, a claim that is allowable in the present application, such claim may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application.
